
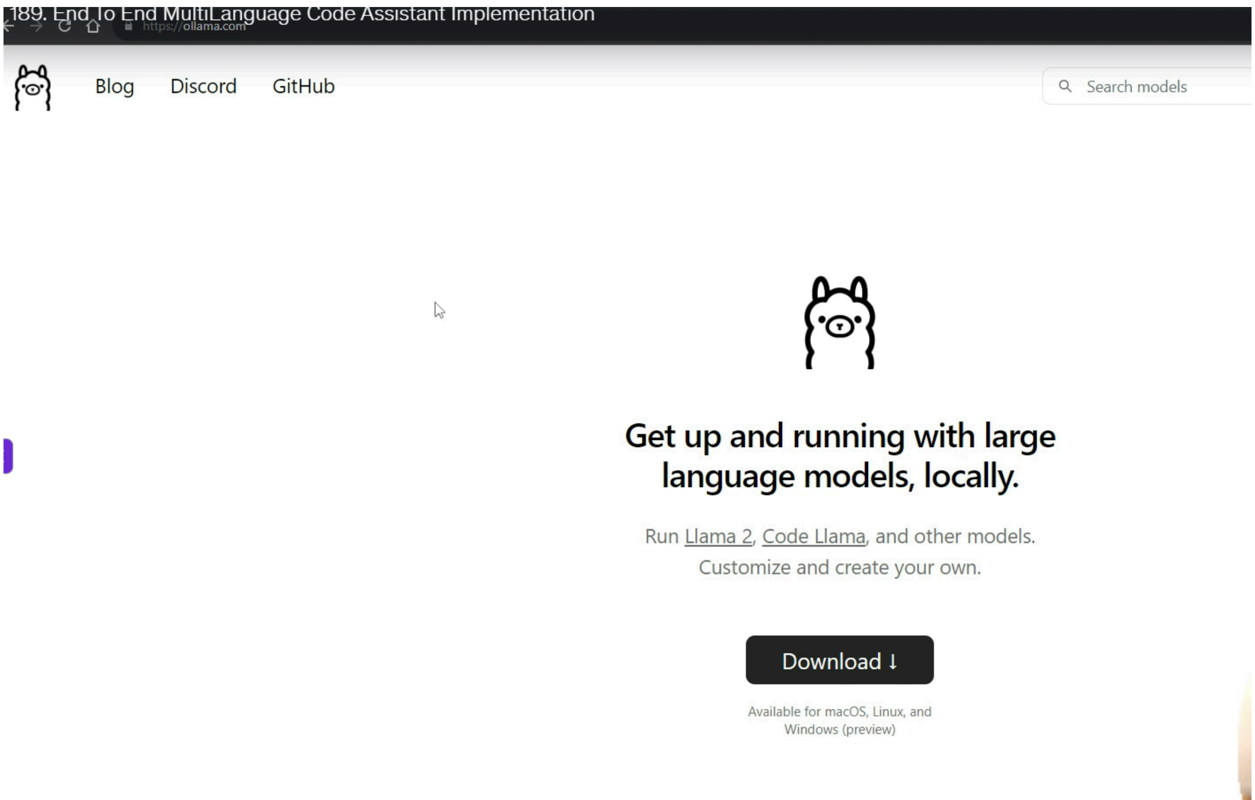
ollama helps you to download all latest open models in your local



download codelamma

THere are ways how you can run the code by Ollama modelfile

```
FROM codellama

## Set the Temperature
PARAMETER temperature 1

## set the system prompt
SYSTEM """
You are a code teaching teaching assisatnt named as CodeGuru created by
Krish. Answer all the code related questions being asked.

"""
```

https://github.com/ollama/ollama

README | MIT license

```
FROM ./vicuna-33b.Q4_0.gguf
```

2. Create the model in Ollama

```
ollama create example -f Modelfile
```

3. Run the model

```
ollama run example
```

Import from PyTorch or Safetensors

Command Prompt

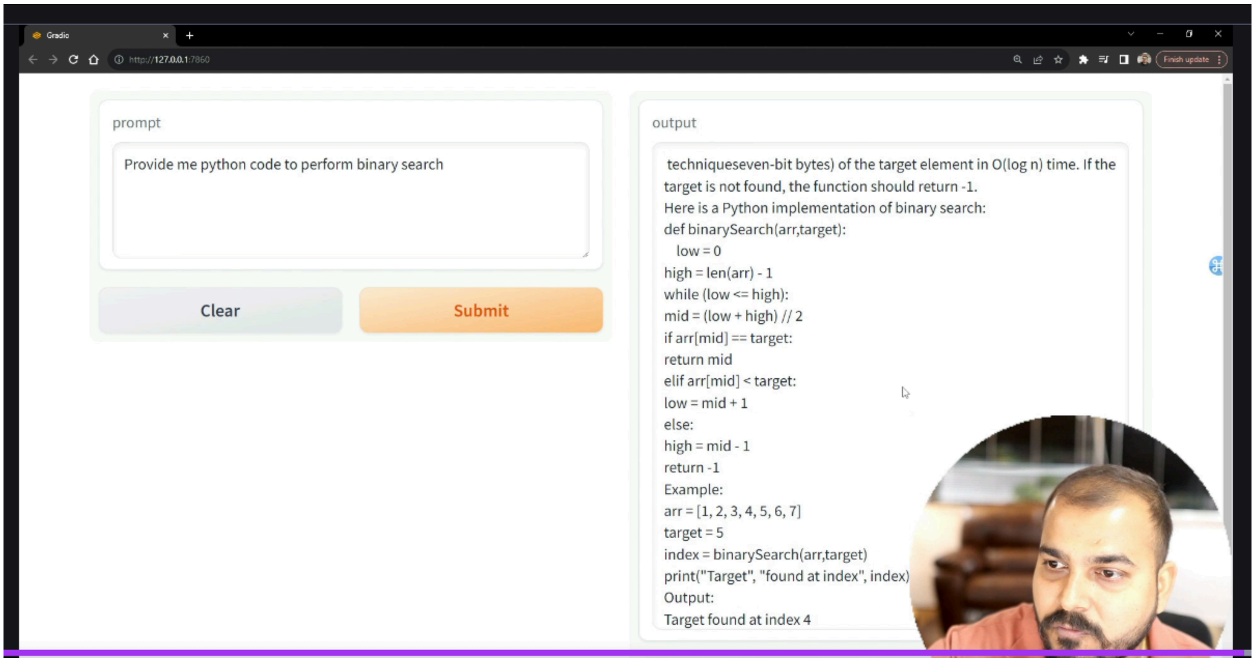
E:\New Recordings\Langchain Videos\Codellama>ollama run codeguru
>>> hey who are you?
Hello! I'm CodeGuru, an AI assistant designed to help with coding-related queries and tasks. I am trained on a
wide range of programming languages and topics, so I can assist with anything related to coding. How may I assist
you today?

>>> Send a message (/? for help)
```

now the codelamma is working, you can integrate this with your code to write the code. Lets integrate it with [app.py](app.py)

Here is the application. Code is self explanatory



Gradio
http://127.0.0.1:7860
Finish update
prompt
Provide me python code to perform binary search
Clear
Submit
output
techniqueseven-bit bytes) of the target element in O(log n) time. If the target is not found, the function should return -1.
Here is a Python implementation of binary search:
def binarySearch(arr,target):
low = 0
high = len(arr) - 1
while (low <= high):
mid = (low + high) // 2
if arr[mid] == target:
return mid
elif arr[mid] < target:
low = mid + 1
else:
high = mid - 1
return -1
Example:
arr = [1, 2, 3, 4, 5, 6, 7]
target = 5
index = binarySearch(arr,target)
print("Target", "found at index", index)
Output:
Target found at index 4
